

Management Module / Remote TCP/IP Maintenance through the Internet

Remote Management Module through the Internet for a fast and effective Systems Maintenance

Anti-theft Systems are more and more required in business in order to protect their products, sensitive to be subtracted by possible thieves.

These systems could require their readjustment or setting over time due to their location in streets or shopping centres where anti-theft systems are installed in great number of stores. Synchronization could be necessary in order to the system back to business properly.

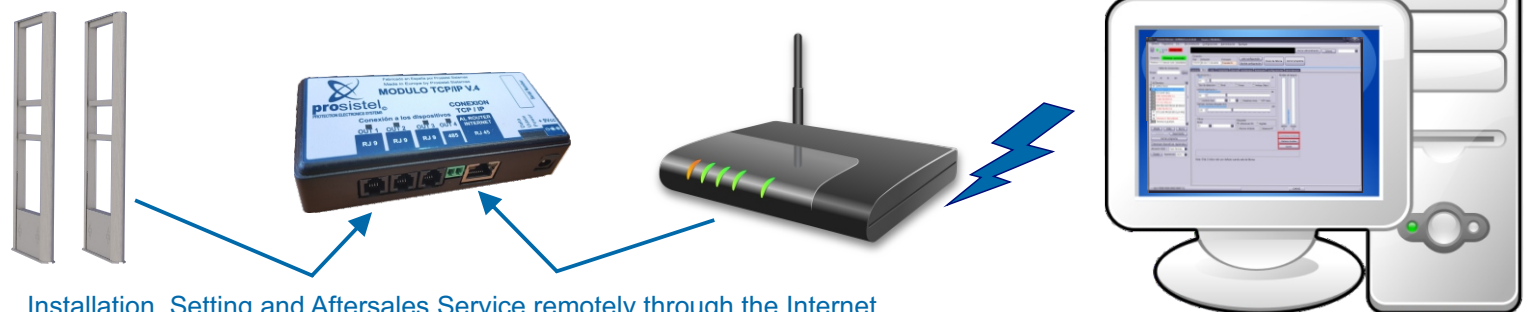

PROSISTEL SISTEMAS put on sale its new **TCP/IP Module**. Thanks to an Internet connection it is possible to manage or maintain your system remotely through your ADSL line. (It is not necessary fixed IP or additional elements).

In case of fault or system readjustment it is possible to get a fast, economic and effective service, without paying trip or labour costs. Within a few minutes, the system will be in perfect operation for an effective protection.

ADVANTAGES:

- Fast and Effective Technical Assistance
- Savings in trip and labour costs
- Connection through the Internet
- ONLINE Access to Display with generated Alarms
- Multiple Connection Entries (COM1-4)
- PLUG AND PLAY (DHCP) Setting
- Multiple Connection through 485

REMOTE MANAGEMENT MODULE THROUGH THE INTERNET

Installation, Setting and Aftersales Service remotely through the Internet (TCP/IP) in real time with a **Standard Internet Connection**
