

Visitor Counter and Occupation Control with Internet Connection to TCP IP

Using devices to control visitor flows is more and more extended between retailers and wholesalers.

These devices let us to control the received influx during the day, the week or the month, through the number of people who enter in or leave the store.

Information about the number of people who enter in our stores, the hour with more influx or store areas with more concentration of people can be essential to take decisions about how to manage economic or human resources.

Prosistel Sistemas offers high quality solutions for retailers and wholesalers to control people influx.

They are available in BOX mode, being able to be install rapidly and discreetly in control or exit points where we would need some influx information.

They are also available in a pedestal way being able to be install discreetly and elegantly.

Prosistel Sistemas offers the last technology in people counting to control influx, contributing to new levels in information control with connection to a powerful management software. It can be connected by a simple cable (RS232) for installations with multiple accesses in one single control post (Rs485) o by an Internet connection where data could be consulted from anywhere in the world through a PC or mobile device.

This system offers the additional advantage of identifying suspected robbers in long distance before they would access to the store through an innovative signal processing technology without antennas.
